My new Invention

My new invention is called “mobile watch” (MW). It is sort of like any mobile. The only difference is it is a watch and you need to wear it on your wrist. It is made of plastic, metal and glass.

It is useful because you don't need to worry about your phone getting lost. It will always be on your wrist. You can even contact your relative's phone number in case of an emergency. It is also used for which location you are because it has a GPS. Moreover, it can help you in any situation.

Although there are lots of advantages of MW, there are still some disadvantages too. For example, it is not waterproof. And it must be charged for at least 1 hour and a half before using it.
